DETAILED ACTION

Response to Amendment

- 1. In response to the amendments received May12, 2003 and May 29, 2003:
 - a. Claims 1-8 and 10-12 are pending
 - b. The drawing objection are withdrawn;
 - c. The specification objection is withdrawn;
 - d. The 112 rejections are withdrawn;
 - e. The prior art rejection of Loewen and stands.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-8 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. patent No. 4,712,299 (Loewen).

Loewen discloses a common carrier comprising: an elongate support member 30 having a plurality of locating holes 12 disposed thereon, a plurality of current collector screens 8 integrally formed with and extending from a portion of support member 30 (Fig. 1). More clearly with respect to the current collector screen limitation. The term current collector is broadly interpreted as any collector material that can collect a

Application/Control Number: 09/773,036

Art Unit: 1745

current. Metal materials would be a broad example since metals are known to amass and conduct current. Thus Loewen, teaching that the sheet is a metal is a broad teaching of a current collector. Further the structure of the collectors is disclosed as a screen, but the particulars of the screen is not further defined. Thus a substrate having openings therethrough defines a particular screen pattern. The material of the sheet is a metal (abstract) thus members 8 are current collectors. Members 8 further have openings formed therethrough and thus are considered to be screens of the patterns shown in Fig. 1. In addition while the entire surface of members 8 are not planar, each of the members 8 comprise planar first and second surfaces. For example the lower portions of the members 8 have planar first and second surfaces wherein the peripheral edges of these portions are not connected to an immediately adjacent member (as applied to claim 1).

The current collector screens 8 are connected to the support member 30 through respective external tabs 14 extending from the current collector screen (Fig. 1 as applied to claim 2).

The current collector screens 8 are spaced apart equidistant from one another and are all oriented in the same position relative to the support member 30 (Fig. 1 as applied to claim 3).

The contacts receive a coating with a highly conductive metal (col. 2, II. 40-42 as applied to claim 4).

Loewen discloses a common carrier comprising: an elongate planar support member 30 having at least one datum (holes 12), a plurality of current collector screens

Art Unit: 1745

8 integrally formed with and extending from a portion of support member 30 (Fig. 1). More clearly with respect to the current collector screen limitation. The term current collector is broadly interpreted as any collector material that can collect a current. Metal materials would be a broad example since metals are known to amass and conduct current. Thus Loewen, teaching that the sheet is a metal is a broad teaching of a current collector. Further the structure of the collectors is disclosed as a screen, but the particulars of the screen is not further defined. Thus a substrate having openings therethrough defines a particular screen pattern. The material of the sheet is a metal (abstract) thus members 8 are current collectors. Members 8 further have openings formed therethrough and thus are considered to be screens of the patterns shown in Fig. 1. In addition while the entire surface of members 8 are not planar, each of the members 8 comprise planar first and second surfaces. For example the lower portions of the members 8 have planar first and second surfaces wherein the peripheral edges of these portions are not connected to an immediately adjacent member (as applied to claim 5).

With respect to the article of claim 5 capable of being oriented with respect to a tool through the datum:

As discussed above, Loewen teaches of plural holes 12 (datum) to guide the strip of metal through a tool (col. 4, II. 23-26). Applicant is further reminded that it has been held that the recitation that an element is "capable of" performing a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patenable sense. *In re Hutchinson*, 69 USPQ 138.

While intended use recitations and other types of functional language cannot be entirely disregarded. However, in apparatus, article, and composition claims, intended use must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. In re Casey, 370 F.2d 576, 152 USPQ 235 (CCPA 1967); In re Otto, 312 F.2d 937, 938, 136 USPQ 458, 459 (CCPA 1963). A claim containing a "recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus" if the prior art apparatus teaches all the structural limitations of the claim. Ex parte Masham, 2 USPQ2d 1647 (Bd. Pat. App. & Inter. 1987). As applied to claim 5.

The current collector screens 8 are connected to the support member 30 through respective external tabs 14 (Fig. 1 as applied to claim 6).

The external tab 14 connects at a substantially perpendicular orientation with the support member 30 (Fig. 1 as applied to claim 7).

The contacts receive a coating with a highly conductive metal (col. 2, II. 40-42 as applied to claim 8).

Loewen discloses a common carrier comprising: an elongate planar support member 30 having at least one datum (holes 12), a plurality of current collector screens 8 integrally formed with and extending from a portion of support member 30 (Fig. 1). More clearly with respect to the current collector screen limitation. The term current

Art Unit: 1745

collector is broadly interpreted as any collector material that can collect a current. Metal materials would be a broad example since metals are known to amass and conduct current. Thus Loewen, teaching that the sheet is a metal is a broad teaching of a current collector. Further the structure of the collectors is disclosed as a screen, but the particulars of the screen is not further defined. Thus a substrate having openings therethrough defines a particular screen pattern. The material of the sheet is a metal (abstract) thus members 8 are current collectors. Members 8 further have openings formed therethrough and thus are considered to be screens of the patterns shown in Fig. 1. In addition while the entire surface of members 8 are not planar, each of the members 8 comprise planar first and second surfaces. For example the lower portions of the members 8 have planar first and second surfaces wherein the peripheral edges of these portions are not connected to an immediately adjacent member. The contact receives a coating (secondary material) (col. 2, II. 40-45; as applied to claim 11).

Response to Arguments

4. Applicant's arguments filed May 12, 2003 and May 29, 2003 have been fully considered but they are not persuasive.

The amendment to claims 1, 5 and 11 does not differentiate itself from the product disclosed in Loewen.

Loewen teaches of members which comprise planar portions wherein the planar portions of the members are not connected to the peripheral edges of adjacent members.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 10 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Loewen in view of U.S. patent No. 3,803,537 (Cobaugh).

The teachings of claims 1, 4 and 11 have been discussed above and are incorporated herein.

The difference between claims 10 and 12 and Loewen is that Loewen does not disclose of the secondary material to be carbon or gold.

Loewen teaches that it is desirable to coat the contact materials with a highly electrical conductive coating.

One skilled in the art of electrical contacts would have recognized that gold is a highly conductive material and one which is well known to have been used in the art of forming electrical contact members (see Cobaugh col. 5, II. 1-2).

The motivation for plating the member of Loewen with gold is that it would have provided a coating having excellent electrical conductivity.

Therefore it would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to modify the teachings of Loewen by coating the member with gold since it would have provided a coating having excellent electrical conductivity.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gregg Cantelmo whose telephone number is (703) 305-0635. The examiner can normally be reached on Monday through Thursday from 8:00 a.m. to 5:30 p.m. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Pat Ryan, can be reached on (703) 308-2383. FAX communications should be sent to the appropriate FAX number: (703) 872-9311 for After Final Responses only; (703) 872-9310 for all other responses. FAXES received after 4 p.m. will not be processed until the following business day. Any inquiry of a

Art Unit: 1745

general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
